

Make Orchidee available to users who:

- have less than one month to get a first result
- are not proficient in linux
- did not spend a long time in Saclay
- ... and yet may be respectable people!

The screenshot displays the Orchidee web interface. On the left is a configuration panel titled 'Basic Parameters' with the following fields:

- Start Date >: 2007-08-30
- Final Date <=: 2008-02-28
- Run.def file: [text input]
- City (optional): riquemes
- Choice of standard climate forcing: [dropdown menu]
- View Firec: Nao
- Coordinates: North 6.0, South -18.5
- Other settings ...: [text input]
- Special Region (optional): Latitude [text input], Longitude [text input]
- Submit: [button]

The main area is a satellite map of Brazil with a large 'OOrchidee' logo overlaid in the center. The logo consists of the letters 'OO' in red and blue, followed by 'rchidee' in yellow and green. The map shows various cities and regions, with a scale bar at the bottom indicating 100 km. The bottom right corner of the map area shows the coordinates 'S 8:19:12 0:61:136'.
